

Prevention of Bullying

This course will increase teacher's capacity to work with children and young people who bully and intimidate others.

Building on your previous knowledge from your Practitioner course you will deepen your understanding of the causes of bullying and learn additional strategies for working with children and young people who bully.

This course will:

- Explore the most up-to-date neuroscience and research about what happens in the brain when people bully and are bullied
- Look at the complexity and importance of empathy related to human behaviour that either promotes healthy development or, where it is lacking, leads to victimisation of others, including animals
- Analyse research and learning from the Thrive Prevention of Bullying Project and disseminate the materials used
