

Percentages

The term 'per cent' means 'out of a hundred'. In mathematics, percentages are used like fractions and decimals, as ways to describe parts of a whole. When you are using percentages, the whole is considered to be made up of a hundred equal parts. The symbol % is used to show that a number is a percentage. Can you see how it looks like the number 100?

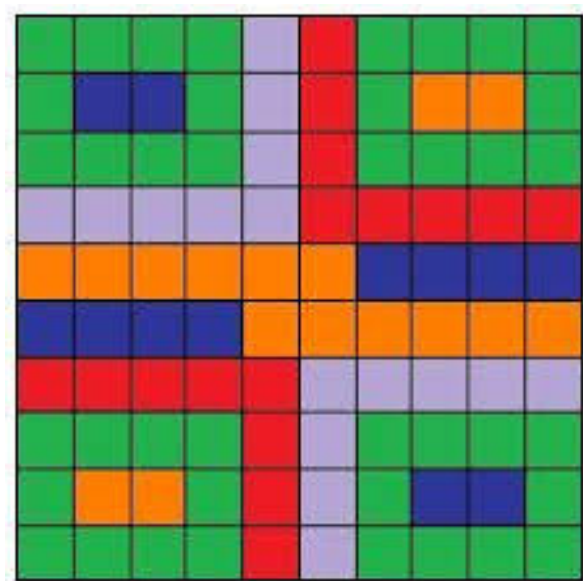

Here are three examples of percentages

After looking and understanding at the example above, can you calculate the percentage of the following grids?

And can you calculate the percentage of each colour in this grid?
